

Allen Ng

Lead Platform Engineer | Enterprise Deployment, Security/SSO & Hands-on Delivery

► lukexng@gmail.com ► Tokyo ► LinkedIn ► Github

Hands-on engineering lead with 9+ years shipping production software and infrastructure in regulated enterprises and startups. At MetLife Japan, partners with the CTO and internal teams to turn operational problems into platforms: self-service infrastructure (React, Go), SSO as code across 1,000+ applications, and automated VM patching. Works with technical and business stakeholders in English, Japanese, Mandarin, and Cantonese.

Experience

MetLife – Tokyo, Japan

Lead Infrastructure Automation Engineer (Manager) March 2025 – Present
Global insurer; enterprise infrastructure in a regulated financial-services environment.

- Partnered with the CTO to design and build an end-to-end self-service infrastructure platform (React, Go, Azure ML), enabling internal users to self-manage infrastructure across multiple components.
- Developed an internal Terraform provider for Ping Identity PingAccess, bringing complex SSO configurations for 1,000+ enterprise applications under Infrastructure-as-Code.
- Designed and built a 0 → 1 VM patching platform covering the full lifecycle of backup, patch deployment, and automated rollback on failure, reducing the headcount required for BAU operations.
- Served as internal AI consultant for infrastructure teams, running hands-on workshops that apply AI tools to real day-to-day engineering tasks.
- Led the adoption of Ansible across MetLife Japan in alignment with MetLife Global strategy, standardizing infrastructure automation and replacing manual legacy workflows with measurable cost reduction.
- Established enterprise-wide Infrastructure-as-Code practices for the APIM catalog, reverse proxies, and related platform components, enforcing full IaC and standardized change workflows.

Senior Infrastructure Automation Engineer September 2021 –
(Assistant Manager) February 2025

- Introduced Chef as the organization-wide configuration management standard across ~2,500 VMs and physical servers.
- Built fully automated, self-service VM provisioning: image templates with Packer, resource provisioning with Terraform, and configuration management with Chef.
- Migrated legacy monitoring, reporting, and deployment practices to modern standards (Terraform, Splunk, Chef), eliminating manual operations.

Zeals – Tokyo, Japan

Head of Microservices January 2021 – August 2021
Chatbot-commerce leader in Japan.

- Partnered with the CTO to translate business requirements into engineering strategy and deliverable goals.
- Led a team of 10 engineers across Japanese- and English-speaking members, owning technical execution and cross-functional collaboration.
- Owned high-level system architecture and technical roadmaps for the microservices platform.
- Designed and implemented Go microservices, including Protobuf schema design and gRPC service implementation.
- Owned platform infrastructure and delivery on Kubernetes, Pulumi, CircleCI, and ArgoCD.

- Established test automation spanning unit tests, cross-service E2E tests, and headless-browser tests simulating user behavior.
- Conducted technical interviews for Go and SRE roles, screening 50+ candidates.

Software Engineer

April 2020 – December 2020

- Joined as an initial member of a new product team; built a complete Go microservice from scratch.
- Owned day-to-day infrastructure while improving CI/CD, monitoring, ML pipelines, and development workflows.

PICKUPP

Lead Software Engineer

September 2019 – March 2020

Crowdsourced delivery platform startup operating in HK, SG, MY, and VN.

- Led the operations product team, owning performance optimization, workflow improvements, and delivery-matching algorithms; delivered full-stack features from business requirements.
- Designed and built data solutions on AWS (S3, Glue, Redshift, Firehose, PySpark).
- Led development of a React Native mobile application.
- Developed custom geocoding algorithms (address segmentation and tagging) for multilingual addresses.
- Trained deep learning models for image classification.

Software Engineer

March 2019 – August 2019

Junior Software Engineer

March 2018 – January 2019

ABC Cooking Studio – Hong Kong

IT System Developer

July 2017 – February 2018

- Maintained company-wide systems and introduced a Kubernetes cluster to improve DevOps practices.
- Refactored legacy PHP web applications to Node.js.

Pesely Packing

Part-time Web Developer

December 2014 – August 2015

- Deployed Magento e-commerce and built an integrated internal product-management backend.

Skills

Software

Go Python TypeScript Node.js React
React Native gRPC Protobuf Redis
Message Queues

Platform &

Kubernetes Terraform Pulumi Ansible

Infrastructure

Chef Packer ArgoCD GitHub Actions
Azure Pipelines CircleCI Datadog
Splunk

Identity & Security

PingAccess SSO Custom Terraform providers

Cloud & Data

Azure AWS GCP S3 Glue Redshift
Firehose PySpark

AI / ML

PyTorch TensorFlow Azure ML Agno (LLM)

Education

BSc, Computing (Enterprise Information Systems)
The Hong Kong Polytechnic University
2013 – 2017

Languages

Cantonese – Native
English – Fluent
Mandarin – Fluent
Japanese – Fluent
